Welcome to Atik Cameras and QSI Imaging at AIC 2019

Atik Cameras manufacture a diverse range of quality astrophotography equipment to suit every level of ability. Our CCD cameras range from the Infinity (a camera dedicated to video astronomy) to the versatile 4-series and the impressive large format range. If you're looking for a CMOS sensor, the Horizon is an amazing, quality cooled 16MP solution. Additionally we have accessories and software to help you get the most from your equipment. Our products are made by astrophotographers for astrophotographers.

QSI is a brand dedicated to making high quality CCD cameras with no expense spared. We've maintained our place in the market as the professional astrophotographers camera of choice thanks to our low-noise electronics that consistently produce the best data. Our aim is to design and manufacture world-class scientific cameras for applications that require superior imaging performance such as astronomical, life science, research and industrial imaging, with completely integrated technology.

Please come and visit our friendly Atik and QSI team on stand 1 and 2, for expert astrophotography advice, tips, troubleshooting, and of course, the latest exciting additions to our product range

What's new for QSI

QSI are proud to announce a new large format camera, the **QSI-6162**. This features the mighty KAF-16200 CCD sensor, produced specifically for astrophotography. The larger case accommodates the 16MP sensor and 2" filters, with the same high quality QSI electronics. Options include an off axis guider and a choice of 5 or 8 position filter wheel, for the complete astrophotography solution.

Now available to order.

If you want quality, you want QSI.

WE'D LIKE YOU TO MEET

ATIKbase

A small computer that can be mounted to your telescope to conveniently control cameras and other hardware from your portable devices, giving a new level of portability and convenience to your imaging. The software is a collaboration with Ikarus Technologies to create a custom version of their highly regarded StellaMate system. Now you can enjoy auto-focusing, powerful image acquisition, plate solving and high accuracy GoTo telescope control. Uniquely, the ATIKbase features an offline EKOS live mode allowing your mobile device to control the imaging system without requiring access to the internet or VNC.... perfect for star parties!
